\*Do not let motor temperature exceed 115°C

Measuring motor temperature is difficult due to the degree of motor integration. Temperature can be estimated based on the maximum operation times. The graph below shows the time for motors to cool to ambient temperature.

**Notes:**

1. Zoom and focus **motor positions may be affected** by backlash and lost steps during movement. Zoom motor lost steps are tested to <40 over the full 3147 step range. Focus motor lost steps are tested to <45 over the full 7705 step range.

2. These motorized lenses are intended for integration into cameras and require motor drivers and controllers. Typically, Theia works with the camera manufacturer to ensure that the camera motor controller matches the lens. It is possible to supply your own motor controller, but Theia cannot guarantee that your motor controller will not damage the lens. Theia does not offer any warranty on the suitability of these motorized lenses for any particular camera. These motorized lenses are **not intended for continuous use** of the motors as in PTZ applications. Theia offers motor control boards that are suitable to control motorized lenses with P-iris.
